Why we started this work

What it aims to solve

Who is the audience

Examples

What we have learned

What is coming now

Why we started this work

- Repeated efforts
 - Sites that go offline
 - Focus on data, not software and websites
-

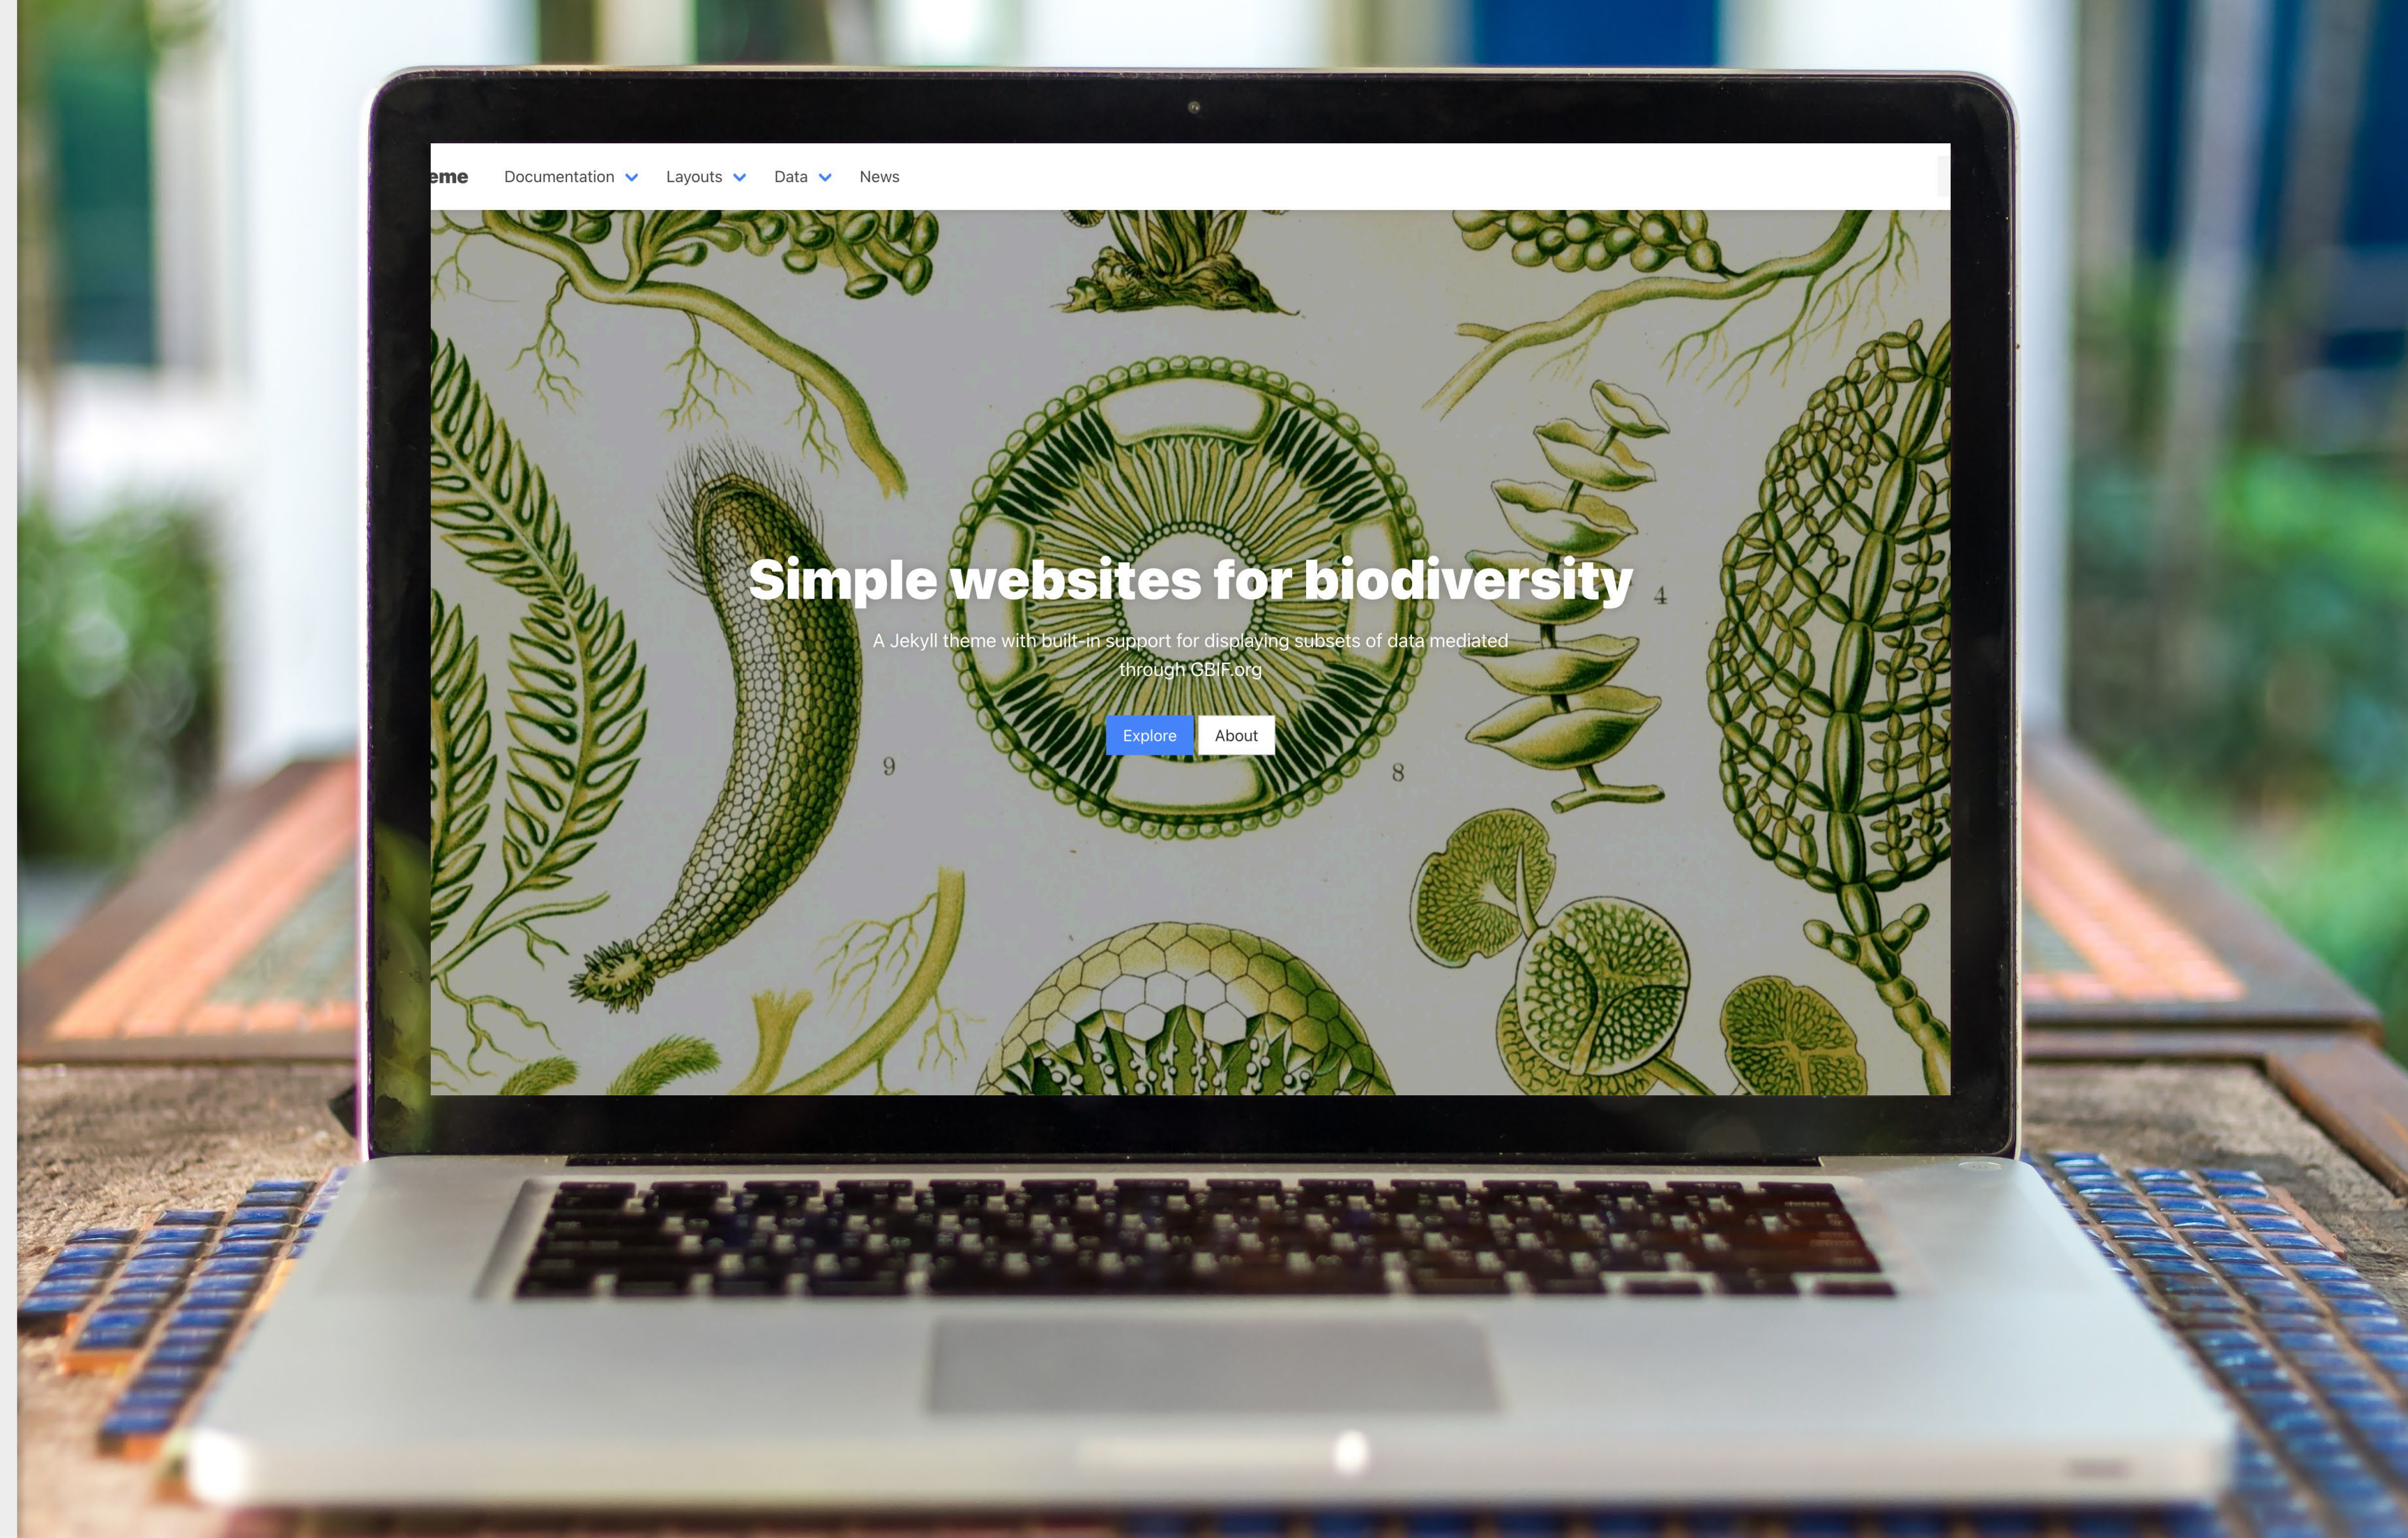

404

This page could not be found.

(Initial) Scope of the project

- Focus on occurrence search
 - Should not require any previous knowledge or skills
 - Easy for the GBIF Secretariat
 - Reusable
-
- Downside: less control + needs to work for 3 billion records as well
-

Audience

More diverse that we thought to begin with

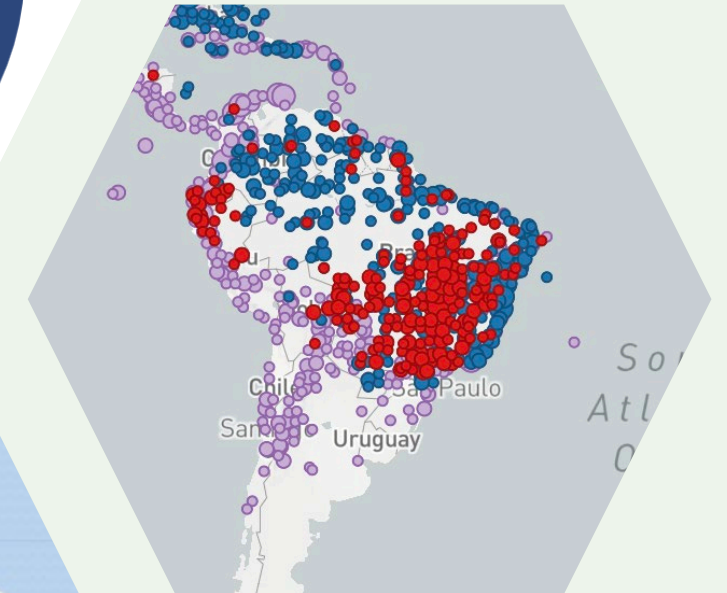

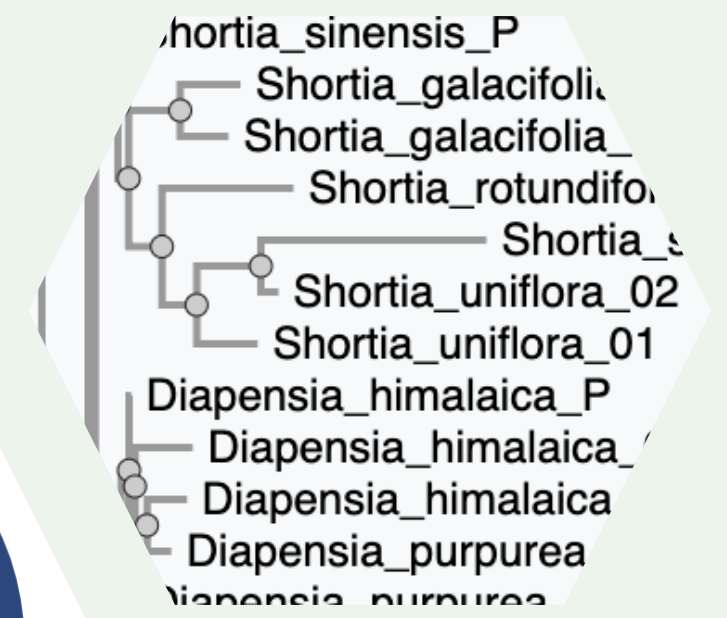

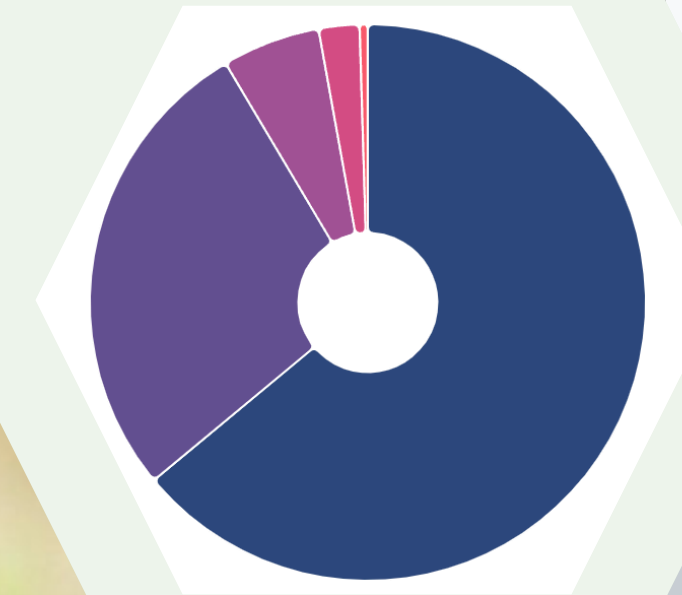

- Past Living Atlas groups (a very feature rich open source project from Australia)
- Those that used to have a hidden page on the university website
- Lost funding to maintain their existing site
- Want to free money to other activities
- Institutions that want a public UI to supplement their CMS

Live demonstration of example sites

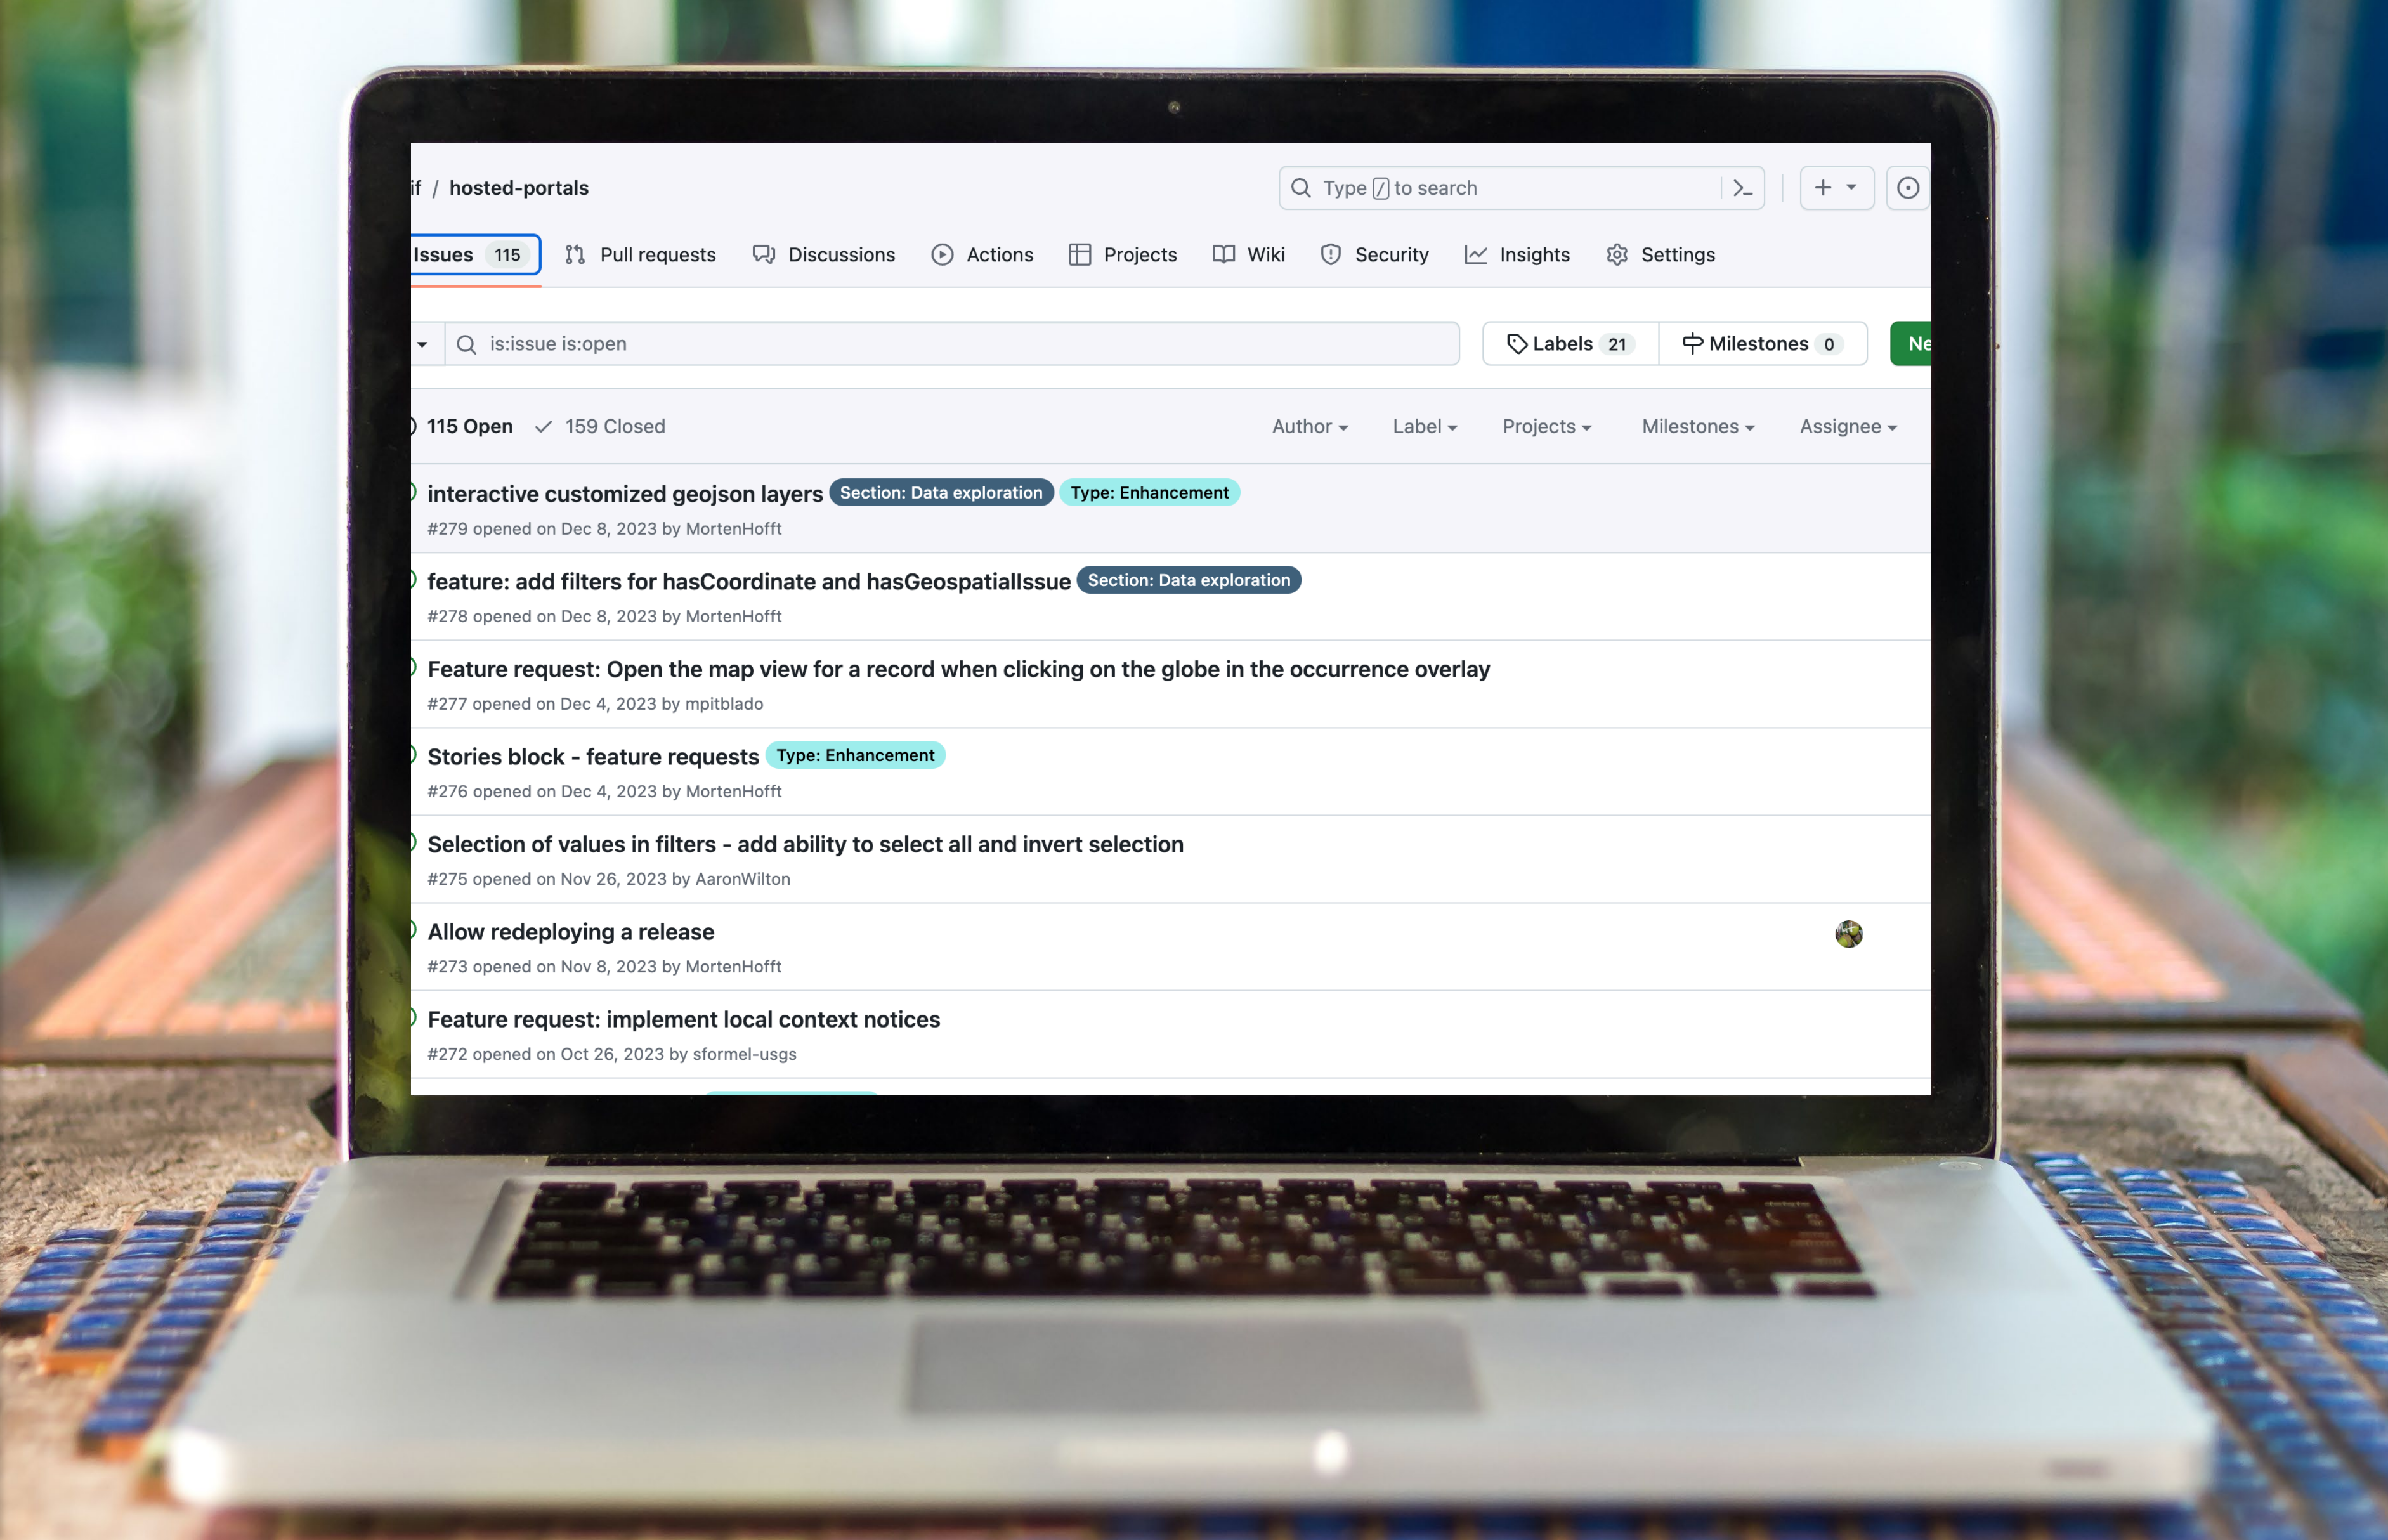

What is next, experiments and plans

- Merge with GBIF.org.
- Partly feature freeze
- Map layers/ colored dots and interactive layers
- Geometry search
- Occurrence detail pages
- Metrics on occurrence search
- eDNA
- Login/user section
- Rule based ranges (annotations, but not) – live demo

What we have learned

Live demonstrations
